Every city and town faces problems with vandalism and graffiti. These are some of the hardest crimes to solve and monitor. Traditional CCTV solutions are expensive and do not work.

PixController UndercoverEye Raptor Cellular/WiFi cameras are portable, self-contained covert security cameras which can be deployed quickly into target areas and send photos to your PC and/or Cell Phone when triggered. These cameras will give you real-time feedback to apprehend suspects when the crime is being committed.

PixController, Inc. specializes in outdoor, self-contained, battery operated, surveillance camera systems. Our motion activated cameras are designed for long-term use to monitor remote sites without power or Internet.
