The Raptor™ RemoteStream camera system is a self-contained battery operated streaming video system designed for outdoor remote surveillance. Streaming video over GSM/GPRS or CDMA cellular networks. The video stream can be started or stopped by wireless sensors, PC Computer or Cell Phone text message, Schedule or Time-Lapse events, or Stream 24/7.

System includes external 12V charging port for long field deployment and includes remote battery monitoring. Video stream can be viewed on Smart Phones or Web Browser interface.

The system can be configured with a second video camera/DVR and be triggered by PixController Wireless Sensors for JPEG photo notification upon streaming event, and optional GPS receiver.

Optional IP cameras can be configured from fixed zoom, zoom, and PTZ cameras.
