Construction, Gas & Oil Wells, and Mining sites are difficult areas to protect and monitor. Traditional CCTV solutions are expensive and do not work due to the lack of power and Internet access.

PixController Raptor Cellular/WiFi cameras are portable self-contained covert security cameras which can be deployed quickly into remote areas and send photos to your PC and/or Cell Phone when triggered.

PixController, Inc. specializes in outdoor, self-contained, battery operated, surveillance camera systems. Our motion activated cameras are designed for long-term use to monitor remote sites without power or Internet.
