The PixController UndercoverEye™ MDVR is an affordable unattended covert video surveillance system specifically designed for targets ranging from, but not limited to marijuana fields, drug/meth labs, metal & copper theft, anhydrous ammonia theft, illegal dumping, graffiti, vandalism, construction site theft, illegal ATV riders, and monitoring remote locations.

The small-sized recording box contains a Mini DVR recording full motion video to a SD card which can be buried into the ground for ultimate covert surveillance. An internal 12V Li-Ion battery powers the system for up to a month of unattended use. A camera is tethered to the recording box which allows connection of standard 12V cameras.

The UndercoverEye MDVR system is triggered by any of the PixController wireless sensors. Sensors ranging from PIR motion sensors, pressure plate sensors, vibrations sensors, and more!
