The PixController UndercoverEye™ Power Box is a system designed to power 12V devices such as IR Illuminators and/or 12V wireless video transmitters in conjunction with the PixController UndercoverEye MDVR, and UndercoverEye Raptor camera systems.

Power Box was designed to provide remote IR lighting or turn on a wireless video camera (assuming a video receiver is connected to the PixController UndercoverEye™ MDVR or Raptor camera system) upon trigger from any of the PixController wireless sensor. The Power Box will give the user the ultimate ability to use the PixController UndercoverEye™ product series with an unlimited number of configurations depending on the situation
