The UndercoverEye™ QTI-Raptor surveillance camera system is an unattended camera specifically designed for real-time photo notification. Upon motion detection the UndercoverEye™ QTI-Raptor system will send you a photo via GSM/GPRS cellular transmission within 30 seconds of the trigger event leaving time to apprehend the suspect onsite.

Sends to multiple email address/cell phones and include a text message with your photo such as a GPS position (optional) and location information and system battery level. System includes a built-in Mini-DVR recorder to record full motion video in MPEG4 format to an included SD media card.

System is triggered by Qual-Tron, Inc, ground sensors. Connect any standard 12V video camera. Includes external charging port for external batteries or solar charging for long-term field deployment.
